Introduction

The worldwide COVID-19 pandemic

- People are suffered the global health crisis as depression and death
- Slowing down of global economy as losing jobs and income
- Negative impact on the living standard of thousands of people
- Putting our society in a threat stage that is hard to recover

Fig 1: The worldwide COVID-19 pandemic

Problems:

- Brings us into the enormous challenge to face
- Deal with global health and economic crisis

Objectives and approaches

- Covid-19 Tracker Website: providing users helpful tool to solve the pandemic's problems happening in Vietnam, especially in Da Nang city.
- **Specifically we aim to:**
 - ❑ Tracking how many C19P, the affected area around them, and the information of whether these patients recovered or not
 - ❑ Supporting sponsors to approach to urgent place to provide charity products in the fasted way
 - ❑ Generating an impressive visualization with the map Vietnam based on District's threat zone specifically
 - ❑ Searching the safe place to go with the protective distance of around 100 meters from the affected area

Technologies

IT frameworks Usability functions

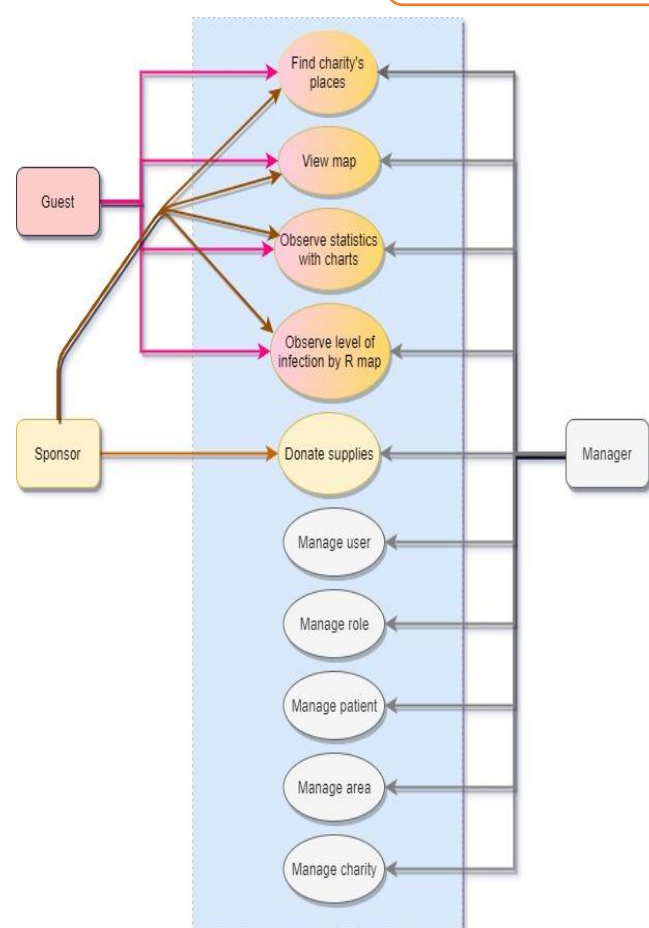

Fig 2: Use case diagram of HTH Covid tracker website

- Java with deployment Azure, MSSQL and Linux Virtual Machine platform.
- Backbone advanced frameworks as Spring MVC and Spring Data JPA (Hibernate).
- The group of R, BI and Embed ELF will handle data analysis.
- HTML/JSP, CSS, JS, ,DOMO, Sitemesh, Google JS API, Google Place API, Spring.
- Security part as MD5, Google Auth API, Facebook Auth API, Spring Security.
- Technological apps such as Maven, Json, SQL Server, JSTL

Data Pre-Processing

Data

- 386 Covid-19 of Da Nang
- 152 males and 234 females
- Between 2-month year old to 93 years old
- Updated by Danang Department of Health hourly by 31/08/2020

The Fig 3 illustrates the details of five C19P who are the youngest (*), the oldest (***) and the three C19P selected randomly.

TABLE I. DATA SAMPLE OF COVID-19 PATIENT IN DANANG CITY

Code	Gender	Birth	Status	District	Address	Coordinate	
						latitude	longitude
954 (*)	F	2020	R	Cẩm Lệ	Trường Chinh,	16.03157	108.1889
985	M	1955	A	Hải Châu	Nguyễn Du	16.07885	108.2206
968	M	1971	A	Thanh Khê	Võ Văn Tần	16.06678	108.2023
1011	F	1982	R	Hải Châu	Phan Thanh	16.06206	108.2085
666 (***)	M	1927	D	Thanh Khê	Lê Duẩn	16.06892	108.2092

Note: F: Female M: Male
R: Recovery A: Affection D: Death

Methods

1. Tracking Covid-19 patients

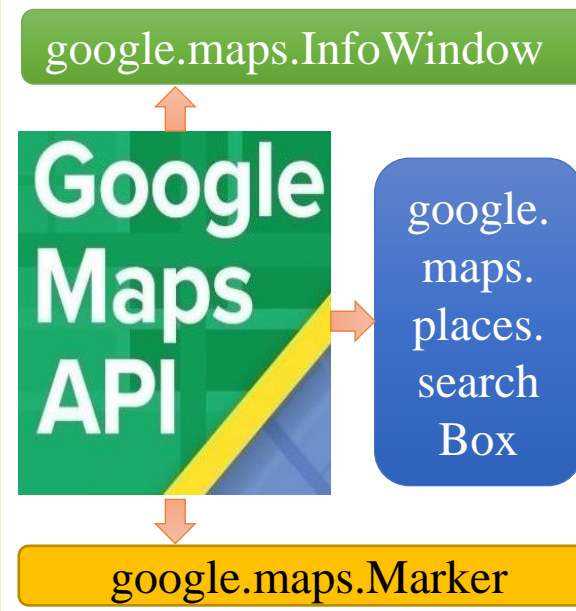

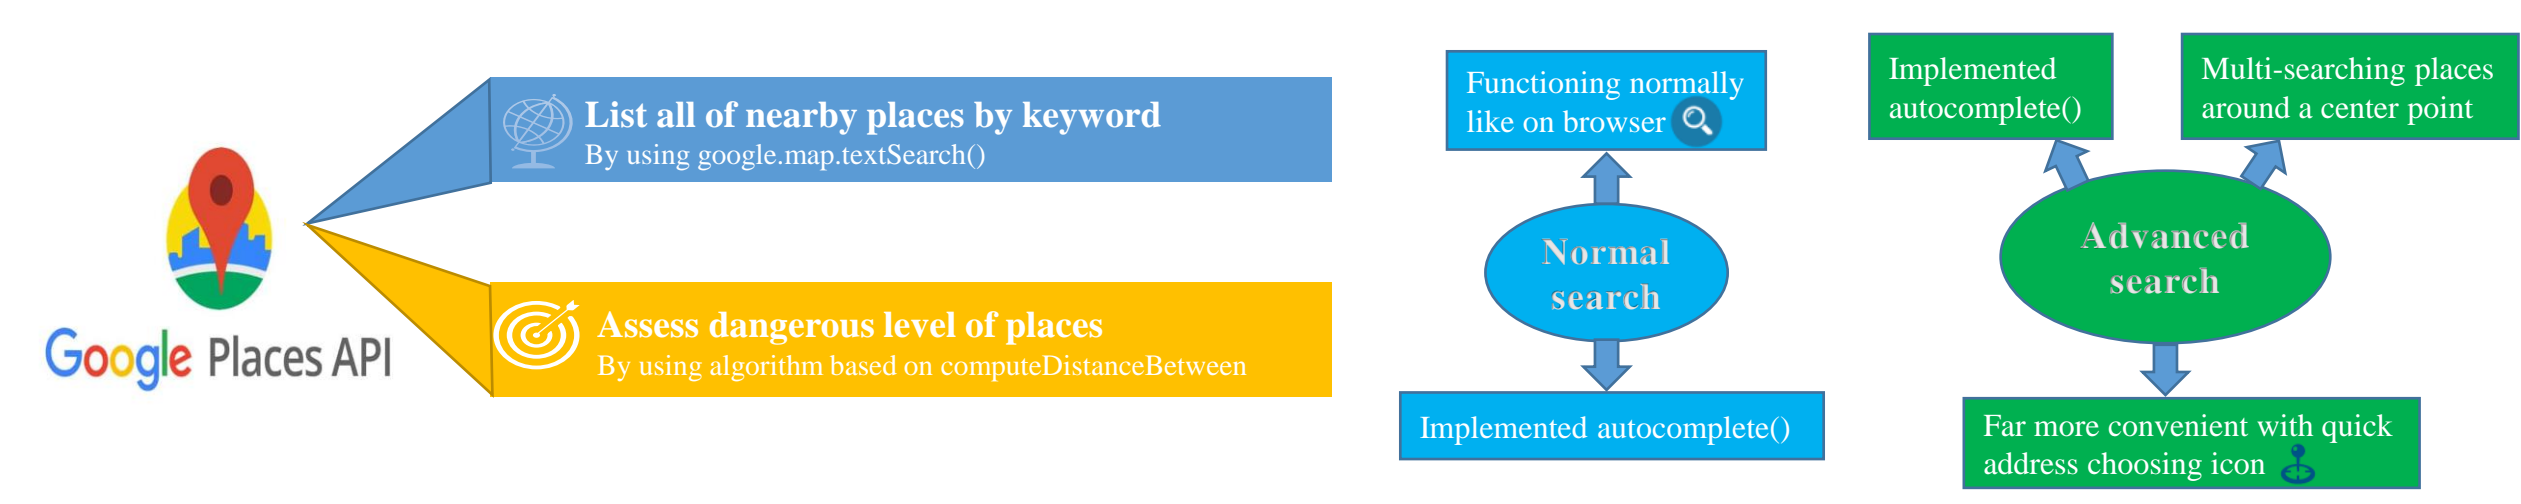

Fig 4: Usage of Google Map API

- ❖ Google Maps API, Maps Embed API:
 - Display the live data synchronizing with its location
- ❖ Allow user to track:
 - Deceased C19P cases
 - Treatment C19P cases
 - Recovered C19P cases
 - Blocked areas.

3. Analyzing Covid-19 Data pattern using R and BI

4. Searching a safe place to go

Results

1. Tracking Covid-19 patients

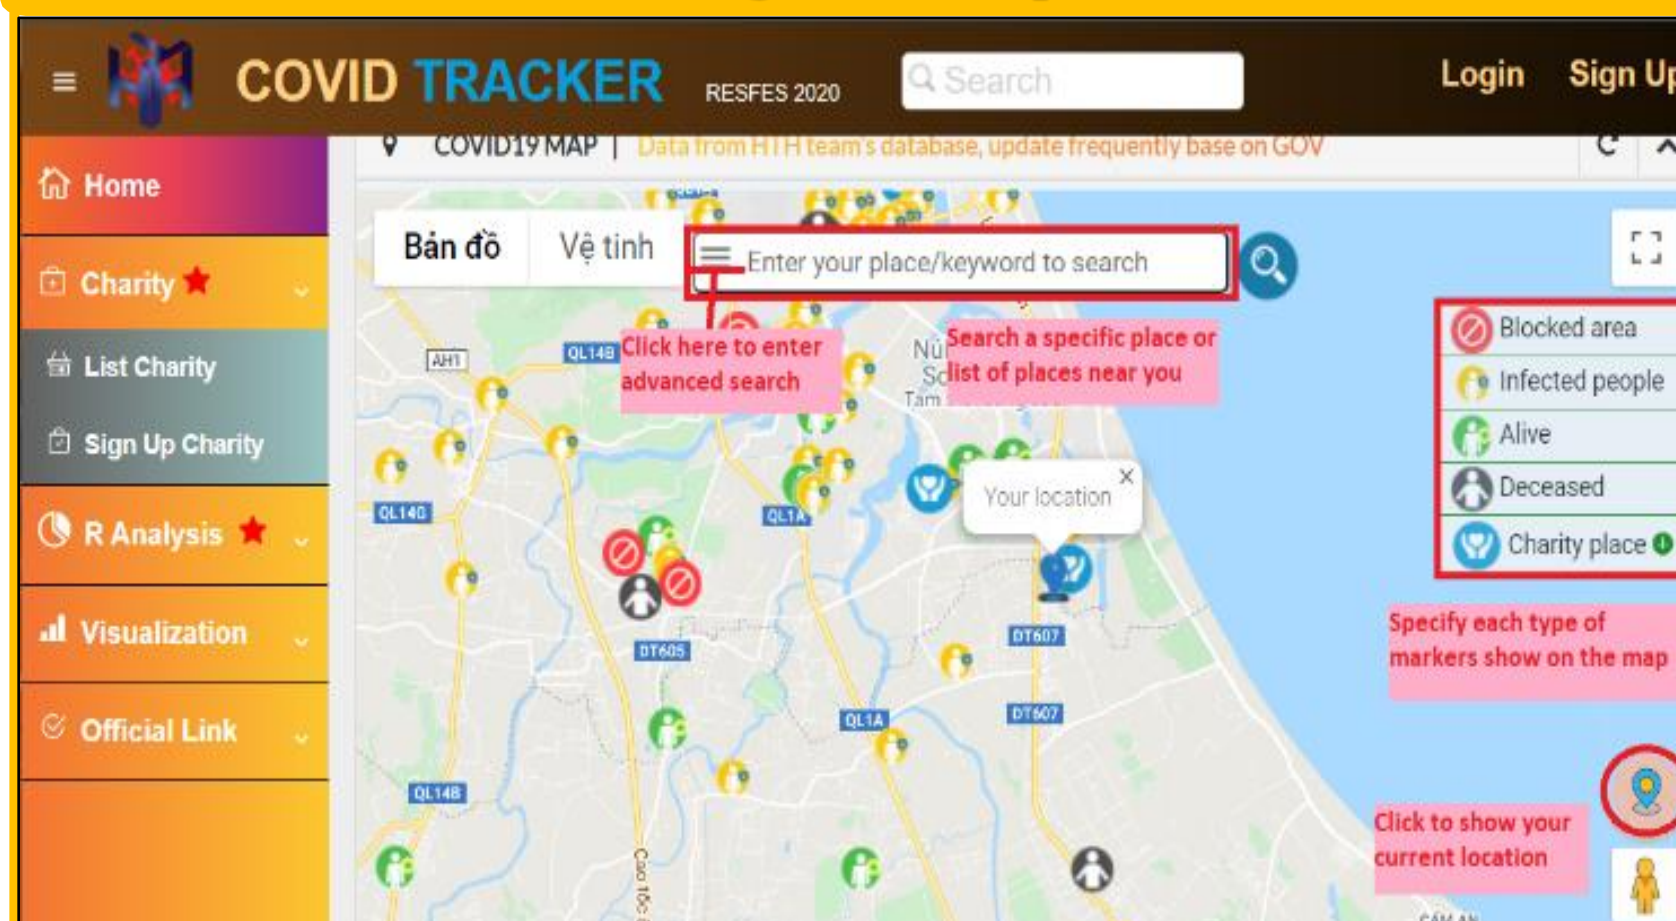

Fig 6: The home-page of HTH Covid tracker website

2. Supporting charity

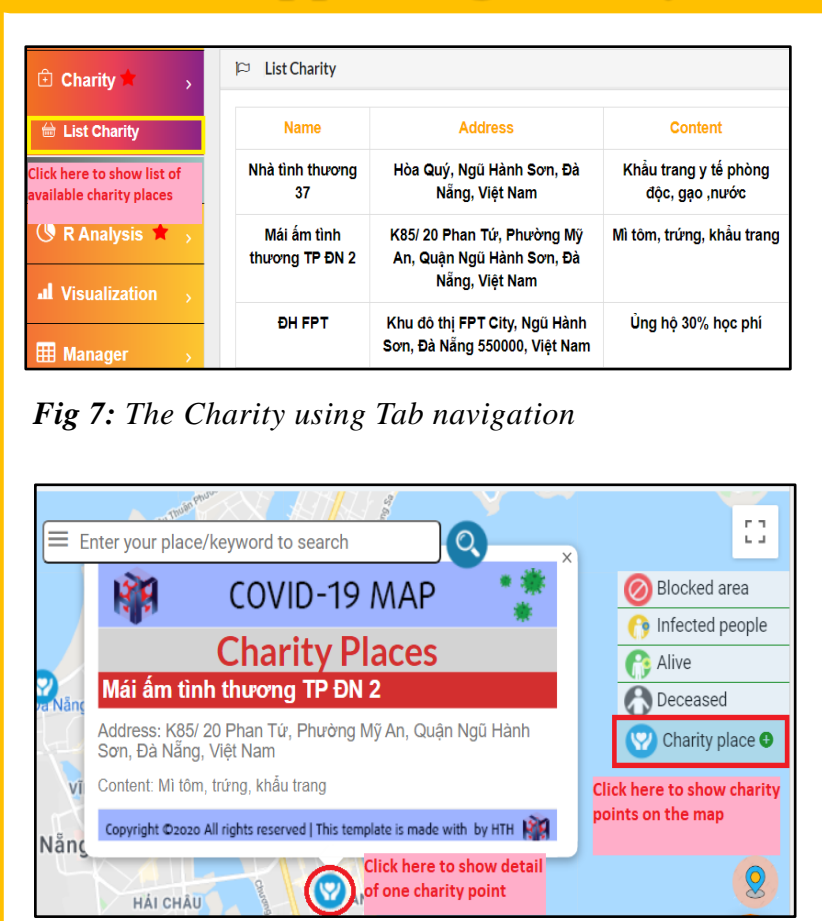

Fig 7: The Charity using Tab navigation

3. Analyzing Covid-19 Data pattern using R and BI

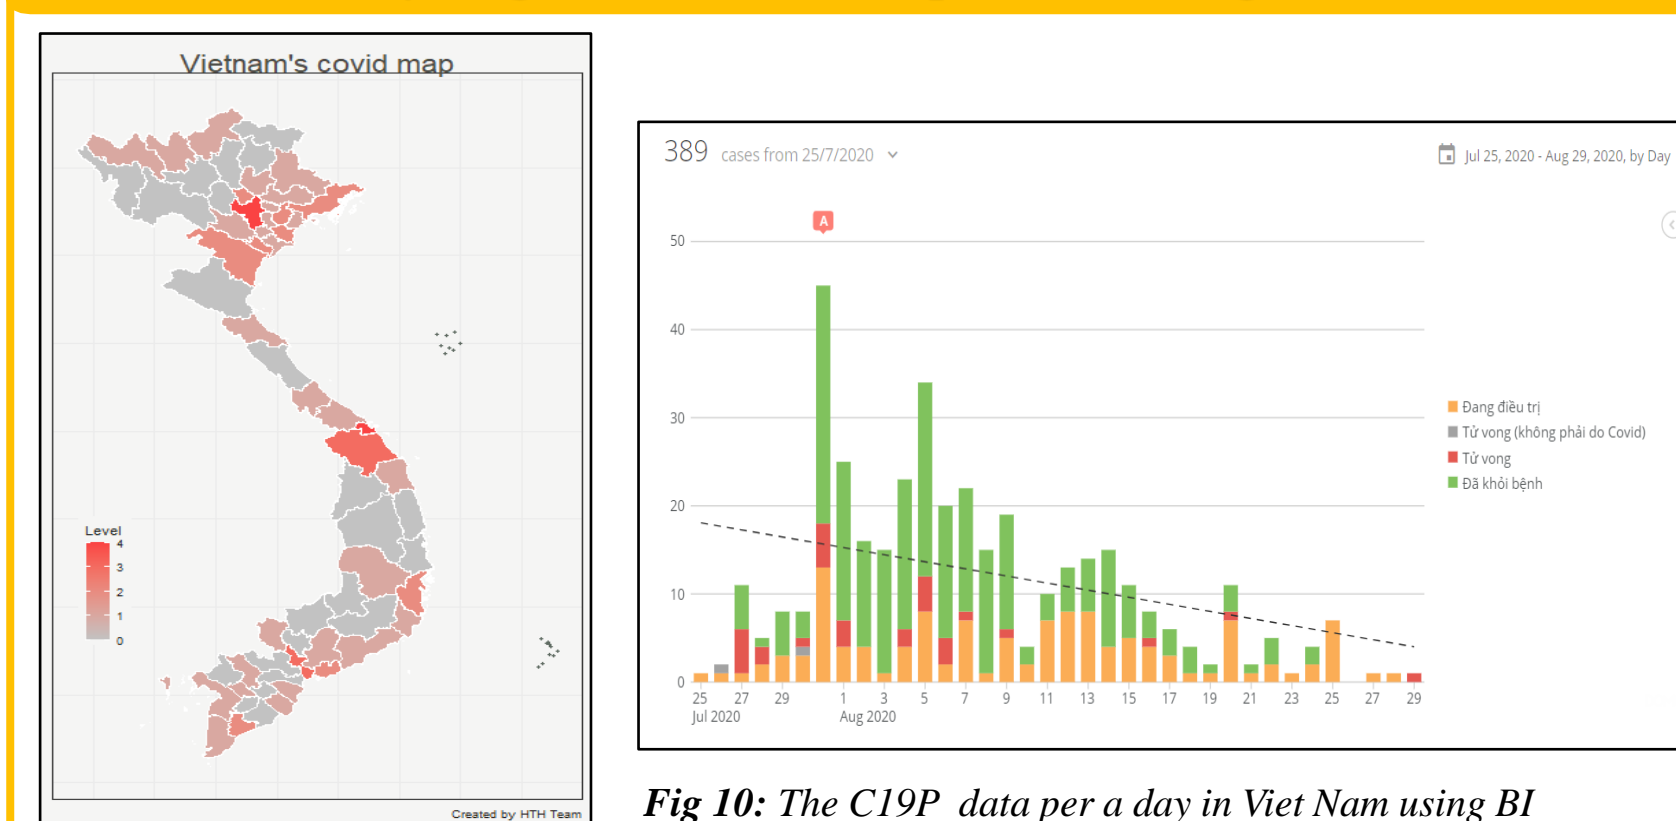

Fig 9: The Vietnam threat zone using R

Fig 10: The C19P data per a day in Viet Nam using BI

4. Searching a safe place to go

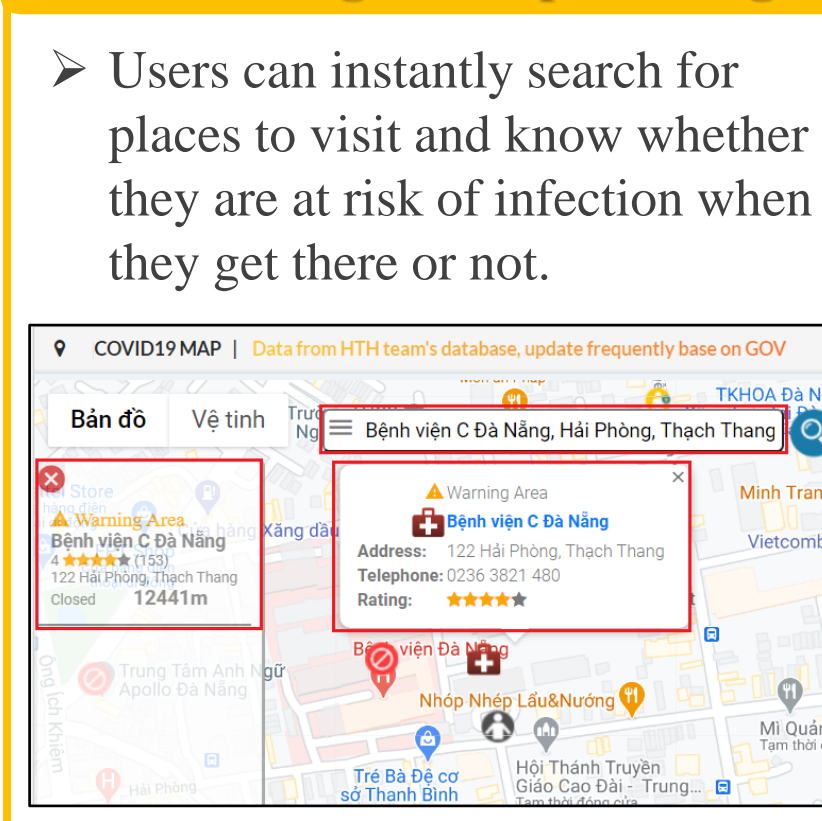

Fig 11: "You are in warning area!"

Discussion

- Reliability**
Data was published and updated by Da Nang department of Health
- Search for place**
Users can instantly search for places to visit and know whether they are at risk of infection when they get there or not.
- Active avoidance**
Unlike Bluezone(detection on contact), this action will help people proactively avoid the dangerous places before they become at-risk people (exposed).
- Friendly, professional**
New users can easily operate with an easy-to-manipulation interface like COVID MAP, R and BI Charts.
- Stop the Covid-19**
Minimize Covid surprisingly spread circumstances

Conclusion

- ✓ Provides a user-friendly interface and the remarkable tool for avoiding, limiting the fast spread of Covid-19 pandemic.
- ✓ Caring environment about charity's activities where the sponsors could connect to the hard people easily and more efficiently for reducing the poverty.
- ✓ For the science purpose the number C19P cases was analyzed and visualized as the live map; generated by R and BI.
- It is expected to be implemented by the data of other regions focus on the automatically update C19P data through official sources.
